

SOS-DS-12017 "Patent Pending" (shown)
for D & S series sankey keg couplers

Reduce Waste, Sell More Beer!

Claim additional revenue from beer that is otherwise being wasted during line cleanings,
Install The ***Sell Out Socket*** on each line the night before lines are to be cleaned.

The **CBServ - Sell Out Socket** allows you to sell beer until a line has been emptied. Made of durable and sanitary 303 stainless steel. The ***Sell Out Socket*** adapts to a sankey keg coupler, allowing for the existing gas system to pressurize and dispense any remaining beer in a line.

Example:

A 10 line beer system has a line run of 100ft, each line holds 75 oz. of beer (equivalent to about 5, 16 oz. glasses), each glass selling for \$5.00.

This would yield roughly 50 glasses of beer, bringing in an additional \$250 that would have been wasted during line cleanings.

Weekly Cleaning: \$250/week x 52 weeks = \$13,000.00 additional revenue per year

Bi-Weekly Cleaning: \$250/week x 26 weeks = \$6,500.00 additional revenue per year
